

# Heritage

## What is Heritage Lead?

A highly effective lead sheet made specifically for historic structures. The top is still made from traditional lead, but the underside is coated with tin for increased protection from corrosion. This distinctive design is perfect for conservation efforts since it blends durable protection with a realistic appearance.

## Where is it used?

- Monuments, churches, & cathedrals
- Heritage roofs and buildings that are listed
- Ridgelines, damp spots, and dormers
- Restoration projects needing authentic lead finishes

## Why choose Heritage Lead?

- Authentic look - visible side is BS EN 12588 lead
- Enhanced durability - tin underside doesn't corrode
- Protective coating - defense against harm from tannins and dampness
- Practical - solders, bends, and cuts like regular lead.
- Sustainable - made from recycled lead, fully recyclable
